Project Type

New Construction
Child Care Facility

Contract Type

General Construction

Contract Value

\$8.7 Million

Completion Date

September 2011

Project Size

\$11 M | 21,500 SF

The Child Care Center at Hort Woods will accommodate 170 children in a new 21,500 square foot facility. The building was constructed to incorporate sustainable features including a rainwater harvesting system, a natural ventilation system that will reduce need for artificial cooling, and an energy efficient building envelope. Solar orientation will promote interior day lighting and lighting system sensors will control electricity usage. The project also included the construction of a state of the art outdoor playscape to both entertain the children and help teach them about conservation and care for the natural environment.
